

Grand Ridge Wind Farm and GE Capital are a powerful combination. 99 megawatts to be exact.

When Invenergy sought financial solutions for its Grand Ridge wind farm in Illinois, its Chicago headquarters called on GE Capital. Their wind farm's 66 turbines can produce 99 megawatts of lower-emission electricity, and has the capacity to power 27,000 U.S. homes. That's an important step toward providing new clean-tech jobs across the state. It's just the kind of thinking that we are happy to put some wind behind.

GE Capital. Supporting jobs and businesses in Illinois.
